Abstract

Learning transforming information behaviors and attitudes. Learning objectives include these domains, cognate, affective and psychomotor domain from the point of view of university education there are three possible answers to be questioned Teaching is lecturing; teaching is the activity of transmitting knowledge to student, teaching is facilitating learning. The present paper discusses the objectives, methodology and personal observations

Introduction

Learning is a process that depends on one's experience to learn new or modifying existing knowledge, behaviors skills and values. The ability to learn is possessed by humans, animals and some machines. Gestalt learning theory proposed several laws of organization which are innate ways that human beings organized perceptions.

Teaching is facilitating learning teachers are always a born to society because of their intelligence, patience and wisdom.

T.F.Greens-Teaching is a task of a teacher, which is performed for the development of a child.

Learning As An Innovative Approach In Education

Learning an innovative approach involving, joint intellectual effort by students or students and teachers together.

The important assumptions about learners and the learning process are

- Learning is an active, constructive, process
- Involvement
- Co-operation and teamwork
- Civil responsibility

Motivation is one of the students progress and ability to learn motivation may be negative or positive tangible or intangible.

Principles Of Teaching

The educators and philosophers have emphasized certain psychological of teaching which the teachers are expected to bear in mind to making their teaching effective, efficient and inspirational psychological principles of teaching are

1. Principle of activity or learning by doing
