

## Understanding Value Education

**Dr. Surekha Sharma**

Principal

Sheiladevi B.ed College Wadi, Nagpur

### Introduction

**H**ere is an introduction to a world in need of value education, world of social animals that differs from rest of the animals on the globe. Value education is merely what a human develops in daily habits and reflects into the character. Life on the basis of the morality one develops in entire loop of life is a main need behind to highlight the need of education with certain values.

**Value education** is the process by which people give moral values to each other. According to Downey It can be an activity that can take place in any human organization during which people are assisted by others, who may be older, in a condition experienced to make explicit our ethics in order to assess the effectiveness of these values and associated behavior for their own and others' long term well-being, and to reflect on and acquire other values and behavior which they recognize as being more effective for long term well-being of self and others. There is a difference between literacy and education

### History So Far

Values always taken place into the roots of any foundation. Every culture has its basic values unless into action. Since human civilization took place human being are only known for their special notion of a wide intelligence human beings, almighty's greatest creation is an example set for universe. Human and nature has a great relationship with each other. Nature has controlled all human activities since years long. The globe has got several varied species living into it. So, what is it that make human to differ from other organisms. It is the cause of our existence. We are known as social animals and have got some special powers within us. We are

known for our intelligence and dominancy due to our creativity. So long I have been addressing upon humans as we because the one who is reading this also human with intellectual sense of integrity and understanding. But what can be a sense behind understandings all facts and logic emotionally, mentally and reacting about by the same time.

### Human: A Cause Behind

As discussed in beginning human are gifted with certain values which act as a framework behind all this facts and possibilities. So, long we have been trying to put light on a fact value, but what certainly puts a simple word to all up big changes in universe. The curiosity takes us years behind into the age of **GURUKULAM** and **SADHUVAS**. From there itself values have created a difference.

If a king ruled a country years behind his people choose him as a king by counting his values upon same way. If a person helped other those are all some basic values what a brain possess within. By counting one can note an entire book of good and bad values of human nature. Hence is nonetheless dear that values indeed rest the fact of human nature of all happenings.

### Education Enlightening Values

But simultaneously a new question arises how education imbibes values into a human brain. So, a wise answer unleashes is that education can play up a legal role in transferring values upon generations to generations. So, long from eras we have been following several legal values and ethics on daily basis just as worshipping lord, greeting each other, being happy and trying others to be. All this moral values play up great role for a prosperous life.

But by the time a question follows through i.e. are we really still at state following all values and ethics? Do we really mean what our textbooks in our primary classes to make space in our heads, because the seen isn't up to the mark? We still find lack of

humanity and values education in certain grounds. It is not mere a person born in the 21th century or even one before witnessed downfall in education based upon values and ethics. But greatness is in a fact that values have not been demolished fully from our cultures.

All the daily upliftments of evils into our hearts through media and practices we perform can be regarded as a cause of abolishment of morals from our lives. What the upcoming generation for now is greatly facing is distance from school and teachers may become another cause in list of hundred's. For past months the distance created between the institutions and students has led to a tincture of salt to the tasteful recipe.

### **Conclusion: School And Institution Spreading Wisdom**

School is not only a place where a student pursues degrees but is institutions where one educates own self with values and moral ethics. Hence the role of schools and education system has a prime role to work upon. Through, time is supreme, for now or tomorrow somewhere we will understand the cause of imbibing values and developing moral ethics into us. By the same time we can also develop or seek to the value education through several of sporting things and reading books also by improving syllabus and techniques through which they are taught. Surely someday again the sun will shine on us brightly.
